

45_g450_g800_g

The unique flavour and fine quality of **LAPUELA** honey is the result of joining tradition with an exceptional environment. We have interited from our elders a passion for beekeeping and respect for Nature. The acidic soil of our mountains, their rich and varied flora and a favourable climate provide exceptional conditions to obtain extraordinary honey.

CALLUNAHONEY

Honey produced by bees from nectar mainly collected from the *Calluna vulgaris* blossom.

ORGANOLEPTICCHARACTERISTICS

Colour: Ligth amber - amber with a hint of red and extraordinarily brilliant appearance.

Aroma: Floral aroma, intense and very persistent.

Taste: Sweet, with clear bitter and salt notes. Jelly-like feeling in the mouth, because of its high viscosity.

POLLENSPECTRUM

Calluna vulgaris

Erica spp

Castanea sativa

PRODUCTIONAREA

Asturian mountains (North of Spain).

HARVESTSEASON: Late Summer.

PACKAGING

GLASSJAR:

45 g | 450 g | 800 g |
